TECHNICAL PROJECTS

STUDENT'S TRACKER | Github
Feb 2024 | India

- Developed this project which utilizes Tensorflow and OpenCV2 to monitor and analyze student movements across the college campus using live camera feeds.
- Implemented Web dashboard for both staff and students to view insights on student location and movement patterns to enhance campus safety.

PTERODACTYL TRIAL SERVERS | Github
Jul 2024 | India

- Developed this client project which allow users to create trial servers without needing a Pterodactyl panel account for temporary server access.
- Implemented secure web API endpoints with Google's ReCaptcha and efficient resource management using React.js, Vite, Express.js, and WebSocket.

FRIX CLOUD | Github
Jun 2023 | India

- Developed a web based platform that allows to remotely control and monitor processes running on local PC or server through an intuitive dashboard.
- Implemented advanced features for real-time access, process management, and system monitoring, enhancing overall system accessibility.
